

Each interactive activity is designed to educate older adults and caregivers about basic steps which they can take to get the best results from their medications. The activities are designed to be fun and engaging.

Rx Roulette Game – This game is a modified version of “Wheel of Fortune,” used to *emphasize both the usefulness of a medication list as well as the important information to document on such a list*. The activity could take anywhere from approximately 45 to 60 minutes depending on the extent of follow up questions asked by participants.

DRUGS Bingo Game – This game is a modified version of BINGO, *used to review non-prescription, or over-the-counter medication (OTC), label and important information which can be found on the label*. The activity takes about 30 to 45 minutes depending on the extent of follow up questions asked by participants.

Getting Information about a New Prescription Role Play Activities – These activities are *intended to illustrate questions to ask a prescriber or pharmacist about a new prescription*. They are divided into 2 separate role-play activities. Activities could also be timed to demonstrate how little time it actually takes to elicit important information about a new prescription. Role plays could be done by 2 presenters, a presenter and a participant, or even by 2 participants if desired. The 2 role plays together, along with a discussion about the dialog should take around 10 minutes.
